SUMMARY

Product Manager with 3+ years of experience building 0 to 1 AI products and agentic systems. Built Lumi, an LLM-driven conversational AI agent achieving 83% retention and 90 NPS through real-time behavioral interventions and rapid experimentation. Led end-to-end product development, from ideation to launch, across AI evaluation, agent design, and system architecture. Skilled at translating user needs into AI product decisions, driving cross-functional execution, and building scalable, user-centric systems.

EXPERIENCE

Co-Founder & Product Lead | LUMI | Jul 2025 – Mar 2026 | Remote

Built a 0 to 1 LLM-driven conversational health AI agent that reasons over behavioral data and executes real-time interventions across voice, text, and integrated systems.

Outcomes: Shipped end-to-end AI product from ideation to launch, achieving 83% retention and 90 NPS through product - market fit validation and rapid experimentation.

- Increased **DAU by 40%** by identifying core behavioral pain points through 100+ user interviews and usage analytics, and optimizing AI agent intervention logic with Engineering.
- **Achieved 83% retention and 90 NPS** by validating product-market fit and willingness to pay (\$40/month) through Wizard-of-Oz experiments simulating LLM-driven behavioral interventions.
- Defined AI quality metrics (accuracy, tone, helpfulness) and partnered with Engineering to improve LLM response reliability, reducing variability in user interactions.
- Translated user needs into AI agent specifications, enabling faster feature iteration (**2.5 tests/week**) and reducing ambiguity in LLM implementation.
- Designed a modular AI system architecture integrating LLM APIs and external data sources, enabling rapid addition of new capabilities without impacting core system stability.

Product Manager | Cograph (Mayai) | Jan – Dec 2022 | Japan

Built and launched v2 of a conversational AI agent for automating inbound business calls and generating AI-driven customer insights for SMBs.

Outcomes: Improved activation (+20%), conversion (+20%), and revenue (ARPU +9%, ARPA +12%) through product prioritization and cross-functional execution.

- Reduced **CAC by 40%** and **increased new trial sign-ups by 20%** by analyzing funnel drop-off data and optimizing targeting and messaging through A/B testing with the help of the Marketing/Sales team.
- Improved **free to paid conversion by 20%, ARPU by 9%, and ARPA by 12%** by leading cross-functional teams to ship Mayai version 2, prioritizing features vs bugs using an impact/effort framework, and executing via PRDs and agile sprints.

Product & Operations Associate | CyMed Inc | Jul 2023 – Jan 2024 | Japan

Built data-driven growth and retention workflows for a telemedicine platform, leveraging GA4 and SQL to optimize funnels and improve patient experience.

Outcomes: Improved conversion by 16% and reduced churn by 9% by analyzing funnel and feedback data and partnering with Engineering and Design to optimize workflows.

- **Improved conversion 16%** by mapping the acquisition funnel using the AARRR framework and segmenting performance by disease category and region - ran A/B tests on targeting and messaging.
- **Reduced churn 9%** by analyzing user feedback data using SQL and identifying root causes of drop-off - users struggled with unclear consultation follow-ups requiring 24-hour wait times for query responses - collaborated with Engineering and Design teams to implement an AI chatbot for instant Q&A, streamlined consultation workflow, and improved response satisfaction.

Associate Product Manager | Beenos (Beeyond) | Jul 2021 – Jun 2022 | Japan

Built a 0 to 1 Shopify-based cross-border logistics platform, defining merchant workflows and onboarding systems for shipping.

Outcomes: Improved retention (60%→76%) and drove 10% MoM growth and 16% integration by optimizing onboarding workflows and acquisition channels.

- Increased 30-day merchant retention from 60% to 76% by diagnosing churn reasons through user interviews - collaborated with Engineering and UX to streamline workflows and fix Figma.
- Achieved 10% MoM merchant growth and 16% app integration by paid acquisition, app store optimization, and user interviews ranking through keyword optimization and review generation, and reduced onboarding friction from 4 to 3 clicks.

EDUCATION

Master of Liberal Arts (ALM) in Management — Harvard University Extension School, USA | *May 2025*

GPA: 3.74 / 4.0 | Graduate Certificate in Marketing Management and Digital Strategy

Integrated Master of Science, Economics — IIT Kharagpur (IIT-KGP), India | *May 2019*

SKILLS

- PM Skills: Agentic AI Product Strategy, AI/ML Evaluation & Benchmarking, Large Language Model Product Design, Design Thinking, Customer Focus, Reliability & Quality Frameworks, Platform Thinking, Cross-functional Leadership, Data-Driven Prioritization, Executive Communication, 0-to-1 Product Building
- AI & Technical Stack: Claude, Claude Code, OpenAI APIs, Gemini, Cursor, LangGraph, LiveKit, Pipecat, MCP Servers, Real-time system integration, Vector databases, REST APIs
- Analytics & Data: Google Analytics, SQL, Funnel Analysis, A/B Testing
- Tools: Linear, Figma, Jira, GitHub, Notion
